

Evidencia Workshop 3 by Jhostyn Rivas

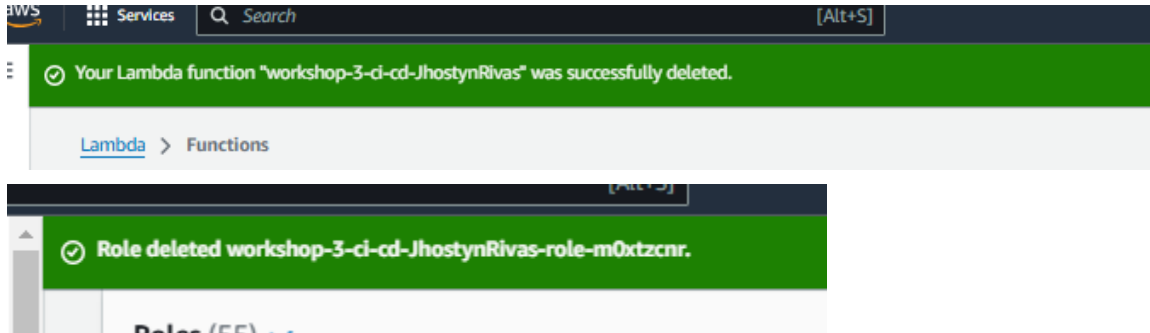

1. Se crea de manera satisfactoria el servicio de Lambda junto con su rol:

The screenshot displays the AWS Lambda console for the function 'workshop-3-ci-cd-JhostynRivas'. The 'Function overview' tab is active, showing a diagram of the function with no layers and no destinations. The 'Code' tab is also visible. The 'Configuration' tab is selected, showing the 'Execution role' section with the role name 'workshop-3-ci-cd-JhostynRivas-role-m0xtzcr'. The 'Resource summary' section shows the function's ARN and URL. The 'Permissions' tab is also visible, showing the 'Permissions policies (2)' section with a table of policies.

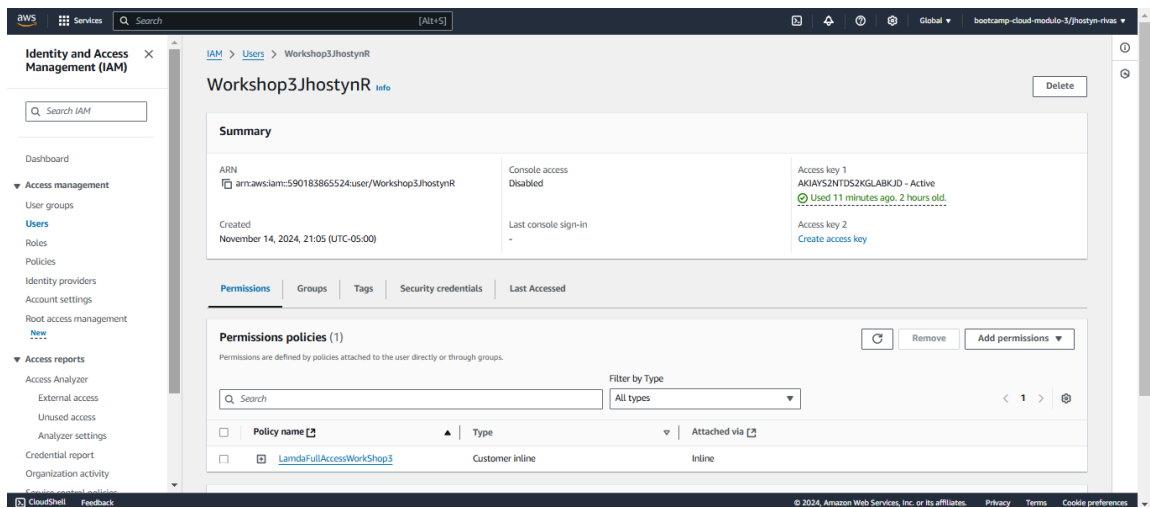

Policy name	Type	Attached entities
AWSLambdaBasicExecutionRole-debdf1...	Customer managed	1
CloudWatchLogsFullAccess	AWS managed	5

The 'Permissions boundary' section shows '(not set)'. The 'Access reports' section shows 'Access Analyzer', 'External access', and 'Unused access'.

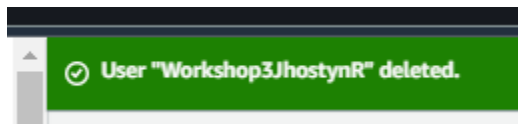

- Se elimina el servicio lambda junto con el rol:

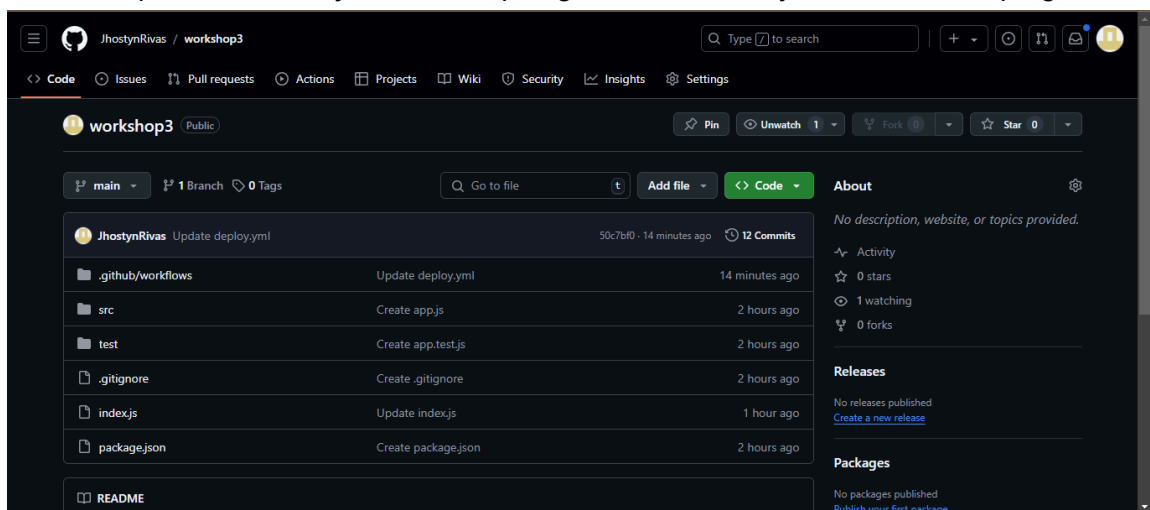

2. Luego se crea el usuario de IAM:

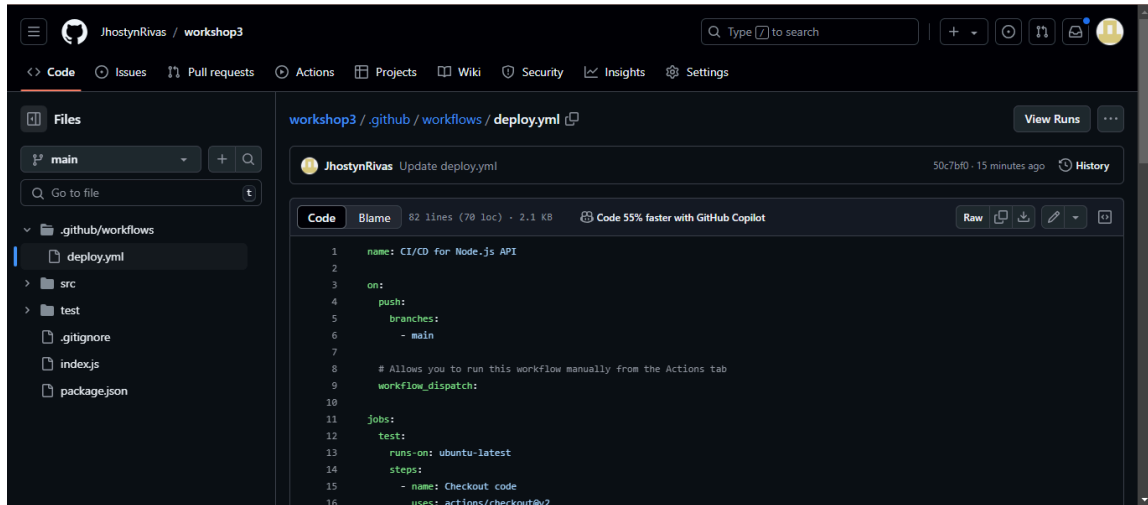

- Se elimina usuario IAM:

3. Se crea repositorio, se adjunta link: <https://github.com/JhostynRivas/workshop3.git>

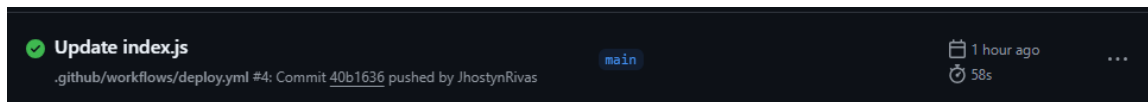

4. Se crea workflow:

5. Notificación fallida workflow:

6. Notificación satisfactoria workflow:

7. Captura de codigo lambda:
